A. How the policy data needed for valuation is accessed?

Data used for valuation is extracted from the Policy administration system as at the last day of the valuation month using data extraction program. For any new product, a change request form (containing the data required for the new products) is provided to the IT function for inclusion of the new product in extraction program. User acceptance test (UAT) is carried on the data extracted from the modified program before using it for valuation. Valuation data files are provided to the actuarial function in CSV format.

B. How the valuation bases are supplied to the system?

Actuarial valuation software AlgoFM is used to calculate actuarial liabilities. The assumptions are supplied to the system from excel files attached to the workspace.

E. Actuarial Valuation Method

Reserves in respect of Unit- Linked product consists of two components- Unit Reserve and Non- Unit reserve. Unit Reserve for all the unit-linked products is the number of units in each of the funds multiplied by their published unit price as at the valuation date.

For Non Linked Individual life and health business and for Non-unit reserve for Linked Business actuarial liabilities have been determined using the gross premium valuation method. Non-unit reserves held by the Company, in respect of linked business, are higher of the GPV and UPR in respect of monthly risk charges at product level.

For Single Premium Group Credit Life business and Group Term Care business, the reserve has been determined using gross premium method. For yearly renewable group term product, reserve held is equal to the unearned premium. Amount of reinsurance ceded has been considered for group business.

For traditional critical illness rider and traditional accidental death benefit rider, reserves have been held as the higher of gross premium reserve and unearned premium reserve.

Additional reserves are held for maintenance expense overrun, closure to new business one year after valuation date scenario, Free look Cancellation, Lapse policies that can be reinstated, paid up policies that can be revived, data inaccuracy, IBNR, Claim in payment, resilience reserves, cost of guarantee and Early Surrender Value Reserves.
